SECTION 4     FIRST AID MEASURES

INHALATION: If adverse effects occur, remove to uncontaminated area. Give
artificial respiration if not breathing. If breathing is difficult, oxygen
should be administered by qualified personnel. Get immediate medical
attention.

SKIN CONTACT: If frostbite or freezing occur, immediately flush with plenty of lukewarm water (105-115 F; 41-46 C). DO NOT USE HOT WATER. If warm water is not available, gently wrap affected parts in blankets. Get immediate medical attention.

EYE CONTACT: Flush eyes with plenty of water.

INGESTION: If a large amount is swallowed, get medical attention.

NOTE TO PHYSICIAN: For inhalation, consider oxygen.

SECTION 5     FIRE FIGHTING MEASURES

FIRE AND EXPLOSION HAZARDS: Negligible fire hazard. Containers may rupture or explode if exposed to heat. Gas/air mixtures are explosive.

EXTINGUISHING MEDIA: carbon dioxide, regular dry chemical

Large fires: Use regular foam or flood with fine water spray.

FIRE FIGHTING: Move container from fire area if it can be done without risk. Cool containers with water spray until well after the fire is out. Stay away from the ends of tanks. For fires in cargo or storage area: Cool containers with water from unmanned hose holder or monitor nozzles until well after fire is out. If this is impossible then take the following precautions: Keep unnecessary people away, isolate hazard area and deny entry. Let the fire burn. Use extinguishing agents appropriate for surrounding fire. Cool containers with water spray until well after the fire is out. Apply water from a protected location or from a safe distance. Do not get water directly on material. Reduce vapors with water spray. Avoid inhalation of material or combustion by-products. Stay upwind and keep out of low areas. Consider downwind evacuation if material is leaking.

SECTION 6     ACCIDENTAL RELEASE MEASURES

OCCUPATIONAL RELEASE:

Stop leak if possible without personal risk. Avoid contact with combustible materials. Keep unnecessary people away, isolate hazard area and deny entry.

Ventilate closed spaces before entering.

effects.

HEALTH EFFECTS:

INHALATION:
ACUTE EXPOSURE:
NITROUS OXIDE: Inhalation of high concentrations without adequate oxygen
can result in headache and serious anoxia causing fatal cardiac
arrhythmias or brain damage with cerebral edema, permanent mental deficit,
and visual system involvement. High concentrations mixed with air or oxygen may produce signs of central nervous system depression including drowsiness, lightheadedness, confusion, hysteria, anesthesia, and unconsciousness. Some persons may experience nausea, and occasionally vomiting, following anesthesia. Anesthetic concentrations may produce permanent hearing loss in persons who have had middle ear surgery. Exposure of pregnant rats to 75% nitrous oxide for 8 hours on the 15th day of gestation resulted in permanent alterations in neurobehavioral output of the newborns as exhibited by hyperactivity in males and hypoactivity in females.

CHRONIC EXPOSURE:
NITROUS OXIDE: Prolonged occupational exposure or abuse has resulted in neurologic effects including initial signs of numbness, paresthesias, and loss of pain and temperature sensation, progressing to muscle weakness, loss of balance, gait ataxia, Lhermitte’s sign, impotence, sphincter difficulties, loss of bladder and vaginal sensation, and reduction in dexterity, cognition, and motor and audiovisual skills. Recovery may occur in months, but damage may be permanent. Signs of bone marrow depression including fatal aplastic anemia have been reported. There have also been increased incidences of kidney and liver disorders, spontaneous abortions, and fetal malformations reported among dentists and their assistants. Exposure to nitrous oxide in utero prior to organogenesis resulted in physical malformations in rat fetuses; permanent alterations in brain function can result following exposure during a period beyond major organogenesis. Prolonged exposure produced some damage to chromosomes in bone marrow cells and spermatogonial cells in male rats. 500 ppm 8 hrs/day/35 days disrupted hormonal cycles and decreased conception in female rats.

SKIN CONTACT:
ACUTE EXPOSURE:
NITROUS OXIDE: No adverse effects have been reported from the gas. Due to rapid evaporation, the liquid may cause frostbite with redness, tingling, and pain or numbness. In more severe cases, the skin may become hard and white and blisters may form.

CHRONIC EXPOSURE:
NITROUS OXIDE: No data available.

EYE CONTACT:
ACUTE EXPOSURE:
NITROUS OXIDE: No adverse effects have been reported from the gas. Due to rapid evaporation, the liquid may cause frostbite with redness, pain, and blurred vision.

CHRONIC EXPOSURE:
NITROUS OXIDE: No data available.

INGESTION:
ACUTE EXPOSURE:
NITROUS OXIDE: If the liquid is swallowed, frostbite damage of the lips, mouth, and mucous membranes may occur.

CHRONIC EXPOSURE:
NITROUS OXIDE: No data available.
